most accepted methods of booting from an external drive is to use an external optical drive as an alternative to the standard hard drive to store all your data (the drive being designed to be removable from the system). You can put your operating system on one drive, and any other software or applications on a different drive. The problem with this approach is that if the optical drive is not used frequently, it will remain in a state of constant readiness, and slowly

lose its operating capacity. And so, you should use this hard drive for storing frequently used data, and not for storing most of your operating system and applications (otherwise, the performance of your main drive will be constantly affected). For this, you need an external drive that can be used with all Windows systems - and that is just what you are going to get with the Samsung SEDE Portable Hard Drive (PHD-Z532/BLZ532).

This is a hard drive that is designed to be used with a variety of computers and operating systems, but its size is such that is it also very useful for being carried from one system to another. The very first thing that you will notice about the Samsung SEDE PHD-Z532/BLZ532 is its shape. Whereas, many of its competitors offer a cylindrical shape, the Samsung SEDE PHD-Z532/BLZ532 offers a square shape, which should not prove to be a problem

when you are using it with your computer. Its size However, the Samsung SEDE PHD-Z532/BLZ
